

Galeon

Private payments for public blockchains.

Public accountability without public beneficiary histories.

Open source · Live on Mantle · Built by Mateo Daza and Carlos Quintero

Two founders built Galeon. Five people own the funded work.

BUILT BY

Marketing + community

Privacy is not one switch.

Galeon separates receiver privacy, transaction privacy, and policy.

01

Ports

A fresh stealth address for every payment.

LIVE

02

Privacy Pool

A ZK proof breaks the public deposit-to-withdrawal link.

LIVE · NATIVE MNT

03

ASP

A policy gate decides which deposits may withdraw privately.

AUTO-APPROVES TODAY

WHAT UNICEF ADDS

Safeguarding gates, realistic usage patterns, and a tested incident response.

LIVE PRODUCT

One private withdrawal, verified live.

Pre-staged deposit

Client-generated ZK proof

Mantlescan shows the relayer, not the depositor

The recipient and amount remain public. We demonstrate unlinkability, not invisibility.

The live product and public repository match.

packages / stealth · contracts · pool · config

Mateo and Carlos built Galeon's product-specific work. Privacy Pool foundations derive from Oxbow.

MIT for apps and libraries · Apache-2.0 for contracts and pool

The product is real. The humanitarian deployment is not finished.

WORKS NOW

Stealth-address payments

Native-MNT privacy pool

Relayed private withdrawal

Public code and licenses

FUNDED WORK

Stablecoin deployment

Real ASP process

External delta-audit

Controlled partner pilot

PROOF BOUNDARY

Galeon proves settlement and contract rules. Partners prove eligibility, receipt, cash-out, and outcomes.

Without an institutional anchor, the privacy model is too weak.

Accountable ASP

Rules, review, appeals, and public attestations.

Active deposit set

Meaningful approved participation, not just a pool balance.

Partner delivery

Enrollment, cash-out, support, and safeguarding.

UNICEF can help test all three under real safeguarding constraints.

UNICEF can test whether Galeon belongs in a humanitarian cash program.

SUSTAINABILITY HYPOTHESES

Hosting + support • ASP operations • Reporting + integration

No current revenue is claimed. The funded period tests whether these services are useful and sustainable.
